REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The prior art does not show or fairly suggest the claimed invention of an ion conductor having the claimed structure and claimed limitations, wherein a rejection under 35 USC 102 or 103 would be improper. Please particularly note the combination of claimed elements and claimed limitations, including as recited in claim 1 (the only independent claim), an ion conductor comprising a fine particle of an organic polymer including 20 to 80% by mass of a ultra-fine particle of an inorganic compound; and an electrolytic solution impregnated into the fine particles of the organic polymer, wherein the ultra-fine particle of the inorganic compound has an average particle diameter of 500 nm or less, and the fine particle of the organic polymer has a specific surface area measured by the BET method of 30 mVg or more.

The object of the present invention, though not specifically claimed, is to provide an ion conductor wherein the amount of electrolytic solution impregnated can be made largely independent of the kind of solvent used in the electrolytic solution, and the concentration of the supporting electrolyte, so that a high ion conductivity can be obtained and the electrolytic solution impregnated rarely leaks.

Therefore, the claimed invention is considered to be in condition for allowance as being novel and nonobvious over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 2873

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Drawings

2. The drawings were received on 7-17-06. These drawings are approved.

Specification

3. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Abe et al (US Patent Pub. 2004/0241553 A1) is an ion conductor similar to the claimed invention, but fails to meet the claimed limitations.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Evelyn A. Lester whose telephone number is (571) 272-2332. The examiner can normally be reached on M-F, subject to an increased flex schedule.
